

Line Logger SD Line Recorder

SD Card Storage

Fully Standalone

World's first HD touch screen embedded voice recorder. Record and playback on the device or any PC – anywhere.

Expandable Storage

Includes an 8 GB SD Card that allows for 560 hours of storage. The SD card can be expanded up to 64GB which will store approximately 4,500 hours worth of calls. Calls can also be exported to a shared or network location to save calls for longer storage. (1TB drive will store 70,000 Hours)

Networking Feature

Connect to the internet or intranet via RJ45 connection. Users can access to the recorders by PC locally or remotely.

Call Detail Recording

Records the detail of each call, including call direction, time/date, duration, CID, trunk number and extension number. (if using SMDR integration)

Multi-Location Environments

The Call Tracker is a perfect solution for the multi-location business. Using the optional Call Tracker Logging software, a multi-location operation can poll devices to centrally store recordings to a central drive on their internal network to enable centralized storage and management of calls across a wide network of locations.

Live Call Monitoring

Administrator can listen to live phone calls on the device or on the PC which runs the Call Tracker Manager software.

Reporting

Call Manager software generates various kinds of statistical chart reports. These help the supervisor to monitor the efficiency of the telephone system.

Key Features

- **Stores at least 560 hours of phone calls (with more storage options available)**
- **Easy-to-use touch screen controls**
- **Playback recordings from the device or from a PC**
- **Live Call Monitor**
- **Search by Caller ID or Number Dialed**
- **SMDR Integration allows for search by extension**
- **Start/Stop Recording Using DTMF Controls**
- **Alerts managers if specific numbers are called in or out**
- **Track unanswered calls, ring times and line status**
- **Power Status & device tampering reporting**
- **Upgrade system firmware remotely**

Optional yearly Software Assurance Plan is **recommended** to extend the manufacturer's hardware warranty coverage, and to receive software upgrades as they become available.
